----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The original April fly-in plan was to be Ocean City MD but transportation to and from any possible luncheon location proved to be too complex. We have therefore **relocated to Millville NJ, KMIV.**

We have not been to Millville in a long time. [Verna's Flight Line restaurant](#) has good reviews from attending pilots on AOPA's airport listings. They will be on vacation shutdown that week, reopening on the 27th, and are eager to welcome us.

For those seeking more than just a lunch with fellow pilots, check out the Millville Army Airfield Museum located near the south end of the ramp. We also highly recommend a visit to the Museum of American Glass located on the north side of town in an area known as glass town. There you can see glass blowers at work and opt for a hands-on session creating your own glass paperweights.

On arrival check the ASOS (119.6) for winds and altimeter setting or check in on Unicom (123.0). The FBO and Restaurant are located on the northeast side, near the center of the ramp area. Notice: main ramp is closed north of taxiway K
